### INDUSTRIAL ACCIDENT STATISTICS, MARCH QUARTER 1967

Details of industrial accidents given in this bulletin are extracted from claims for workers' compensation finalised or becoming three years old during the quarter ended 31 March 1967. They do not refer to accidents actually occurring within this period.

Tables 1 to 8 are standard analyses of work injuries which are regularly published each quarter. However, details of other classifications of work injuries and details of occupational diseases are not published regularly but are treated periodically as special topics.

In this issue the special topic consists of an analysis of work injuries classified according to the time of day when the accidents occurred (Tables 9 to 14). The latest available annual figures (1965-66) have been used.

Of the 10,130 work injury claims finalised during the quarter ended 31 March 1967, 9,406, or 92.9 per cent, were for males and 724, or 7.1 per cent, for females. During the period 14 fatal accident claims were finalised, all for males. Total time lost through temporary disabilities amounted to 178,760 days for males and 13,633 days for females.

An analysis of all claims finalised during the March quarter shows that 97.9 per cent of the injuries were of a temporary nature, 2.0 per cent resulted in permanent disabilities, and 0.1 per cent were fatal. The most common injuries to males were lacerations and open wounds (26.9 per cent of all injuries) and sprains and strains (26.7 per cent). The same types of injuries were also the most common for females. However, sprains and strains occurred more frequently and accounted for 29.8 per cent of all injuries received by female workers compared with 25.8 per cent resulting in lacerations and open wounds.

The average number of days lost by male employees through temporary disabilities was 19.4. The highest average absence (25.7 days) was experienced by waterside workers and freight handlers, and the lowest (14.9 days) by metal tradesmen and process workers. Of all temporary disabilities to males, 41.1 per cent were of less than one week's duration. The average number of days lost by female employees through temporary disabilities was 19.2. The highest average absence (26.4 days) was experienced by sales workers and the lowest (12.3 days) by textile and clothing trade workers. Of all temporary disabilities to females, 38.4 per cent were of less than one week's duration.

Tables 9 to 14 deal with work injuries classified according to the time of day when the injury occurred. Of all accidents for which the time of day was recorded, the highest concentration occurred in the hour between 10.30 a.m. and 11.30 a.m. (13.0 per cent). Other periods which recorded high concentrations were, in the morning, between 8.30 and 9.30 (11.5 per cent) and 9.30 and 10.30 (12.1 per cent) and, in the afternoon, between 2.30 and 3.30 (11.9 per cent). However, readers interested in further analysis of these tables should have regard to the diversity of working hours resulting from shift work, meal breaks, and varying starting and finishing times of day workers.

### Explanatory Notes

Throughout this bulletin the objective has been not only to meet the requirements of the Division of Occupational Safety of the State Department of Labour and Tourism, but also to conform to standards set by the International Labour Organisation for the international comparison of industrial accident statistics.

### Scope and Coverage

The Workers' Compensation Department of the Queensland State Government Insurance Office is the only body authorised under the provisions of "The Workers' Compensation Acts, 1916 to 1966" to issue industrial accident policies in Queensland. Claims made on this Department are therefore the sole source of information on compensative industrial accidents. However, although all employers are required by legislation to apply for a policy to cover all workers employed by them, these statistics cannot purport to represent all industrial accidents occurring in the State. Coverage is necessarily limited by the terms of the Workers' Compensation Acts. The chief deficiencies are:

- (a) Self-employed persons are not obliged to insure under the Act. They may insure voluntarily, but those who do so represent only a small proportion of all self-employed persons, limiting the coverage of persons in the Primary Industries particularly.
- (b) Commonwealth Public Servants are excluded from the provisions of the State Act, thus limiting the coverage of persons in the Communications Industry (e.g., P.M.G.).
- (c) Members of the Queensland Police Force are also excluded from the provisions of the Act.

By definition, the scope of the collection is limited to include only those injured employees who lost at least a full shift from work as a result of the accident. This bulletin contains particulars of "first reports" of claims finalised during the quarter. (Details have been extracted for re-opened claims where disabilities recurred, but no analysis is yet available.) Accidents occurring during recess periods or on journey to or from work are excluded.

### Definitions

An Industrial Accident is defined as any compensated work injury or a compensated occupational disease causing death or permanent disability, or the temporary disability of the injured person during the entire interval corresponding to the hours of his or her regular shift on any one or more calendar days subsequent to the date of the injury.

Fatal injuries are so classified regardless of the time intervening between injury and death, providing that death occurs within three years of the intimation of the claim.

Permanent Disability is an injury or disease which does not cause death but which results in the complete loss or loss of use of any member or part of a member of the body, or any permanent impairment of functions of the body or part thereof.

Temporary Disability is any injury which does not result in death or permanent impairment, but which renders the injured person unable to perform a regularly established job during the entire time interval corresponding to the hours of a full, regular shift.

Accident Factor is defined as the means by which, or the circumstances under which, industrial injuries occur.

### General Comment

Special note should be made of the distinctions between "Injury" and "Disease" cases for the compilation of these statistics.

Some diseases or infections may result either from a minor injury or from some continuous action or sustained exposure to a harmful medium without any evidence of an injury. However, where there is any evidence at all that a disease has resulted from an initial injury, then the episode is classified as an injury rather than a disease (e.g., conjunctivitis and corneal ulcers resulting from foreign body in the eye, flying particles or scratches to the cornea; bursitis or cellulitis resulting from bruising or crushing; displacement of intervertebral disc (slipped disc) resulting from sprains and strains). On the other hand, teno-synovitis caused purely by continuous movements of a joint is treated as a disease. Miscellaneous reactions of the body to effects of poisons and weather etc. are included with work injuries as "other injuries" in the nature of injury classification.

The International Labour Office distinguishes an occupational disease from a work injury in that it exhibits one or more of the following characteristics:

- (i) The slow and protracted nature of its cause.
- (ii) Its ascribability to repeated or continuous action of a mechanical, physical, or chemical cause. It is not the effect of a single event but of a cause acting imperceptibly and constantly.
- (iii) Indeterminateness of the time of its beginning due to its slow and insidious development.
- (iv) The possible importance of individual predisposition as a factor in the development of the pathological conditions.

Cases of occupational diseases which have been precipitated or aggravated by some accidental event are classified to the antecedent accident rather than the disease. Such cases consequently are included in tables of work injuries and are excluded from tables of occupational diseases.
